

The Huntress Managed Security Platform

Fully managed cybersecurity built for businesses like yours—backed by our 24/7 human-led SOC.

Huntress Managed Solutions

Managed Endpoint Detection & Response (EDR)

Detect and prevent endpoint threats at the source.

Huntress Managed EDR levels the playing field with top-tier endpoint security specifically built for you. With our fully managed approach, you won't have to deal with noisy alerts, allowing you to concentrate on genuine threats, not a barrage of false alarms. Our technology identifies shady hacker activity while our experts provide around-the-clock threat hunting and response, isolating and remediating threats on your behalf.

Managed Identity Threat Detection & Response (ITDR)

Safeguard your identities from session hijacking, credential theft, and more.

Huntress Managed ITDR (formerly known as MDR for Microsoft 365) is a fully managed identity protection solution designed to defend against the inbound tidal wave of identity-focused tradecraft, like unwanted access and business email compromise. Managed ITDR provides 24/7 identity monitoring and response while limiting noise. Our experienced threat analysts monitor and respond in real time to critical security threats, alerting you on threats only when they're designated as truly malicious.

Managed SIEM

Stay secure and compliant—all at a great value and predictable price.

Huntress Managed SIEM strips out the cost and complexity found in traditional solutions. Our Smart Filtering technology flips the SIEM script to focus only on the data that matters. Paired with 24/7 monitoring and end-to-end management, it ensures that you're not buried under a sea of logs or noisy alerts. With easy searches, storage, and predictable pricing, our Managed SIEM is everything you want from a SIEM and nothing you don't.

Managed Security Awareness Training (SAT)

Go beyond the compliance check box.

Your employees are your first line of defense. Huntress Managed SAT makes sure they're ready. Our story-driven training teaches employees how to recognize common cyber threats. Powered by our SOC experts, the lessons stay current with the latest threats in the field. Admins love it because it's easy to deploy and requires little to no ongoing management. Learners love it because lessons are short, engaging, and memorable. And hackers hate it because it actually works.

The Huntress Difference

Built for you, fully managed by us

While other solutions expect you to do all the work, Huntress takes that off your plate. Our fully managed platform does the heavy lifting for you—backed by the experts of our 24/7 SOC who monitor your environment and catch threats before they become problems. We don't just alert you to issues; we fix them, filtering out false positives and remediating on your behalf. You stay secure, without the headaches.

Expertise included, not required

You shouldn't have to build a team of skilled security professionals to protect your business—that's our job. Our solutions come with some of the best security minds in the industry, built in. Whether it's threat detection, remediation, or support, our experts have seen it all and stopped it all—so you can focus on running your business. With a 98.8% support customer satisfaction rating, you can trust we're always here when you need us.

Affordability and simplicity without compromising quality

Why pay for features and functionality you'll never use? Huntress prioritizes affordability and simplicity, delivering the essential tools you need to stay secure, without compromising on quality. We focus on providing real value, not inflating prices with unnecessary add-ons.

“

With the Huntress SOC, we have some of the best minds in cybersecurity at our disposal. They help us validate incidents, handle them and also level up our own knowledge. With the context and information included in their personalized reports, any tier one technician can easily understand what threats have been detected and take the appropriate next steps - it's been a great force multiplier for us.
