

Huntress Managed Security Awareness Training

Security Awareness Training From Real Security Experts.

Empower your employees to identify and report cyber threats with engaging, story-driven lessons fully managed by Huntress. Admins love it. Learners love it. Hackers hate it.

Admins love it because management couldn't be easier. Deployment typically takes 3 minutes with little to no ongoing management needed. Huntress Managed SAT integrates with your stack, gives you robust automated reporting, and includes a custom content creator that acts as a lightweight LMS.

Learners love it because lessons are fun and memorable. An award-winning animation team creates episodes with relatable characters like DeeDee, a child hacker prodigy. The characters' schemes, like using social engineering to steal tickets for a sold-out concert, teach learners how to defend themselves against cyber attacks. Users learn in short bursts, not boring annual lectures.

Hackers hate it because it actually works. Huntress Managed SAT is built and backed by the same cybersecurity experts that manage the endpoints and identities for hundreds of thousands of organizations. These experts create new episodes and phishing simulations based on what they're seeing in the field to help your learners defend against today's threats.

“ I get feedback monthly from our employees that ‘this is so great,’ and ‘we want to see what happens with DeeDee next’. It’s definitely engaging.”

Jared Couillard
CISSP Senior Director, IT & Security Officer - Cohere

In just minutes, you can roll out a fully managed security awareness training program that improves your security posture without your admins needing to manage it.

Engaging Content

Managed SAT uses a unique combination of cybersecurity expertise, award-winning animators, and learning science to create story-based episodes covering security and compliance topics to help your people better remember and internalize lessons.

Fully Managed (Optional)

Unlike other SAT programs, no security expertise or complex management is required with Managed SAT. Let Huntress' security experts take over creating, curating, and scheduling learning programs and phishing scenarios for you. Your learners are empowered to defend against modern-day threats without you lifting a finger.

Threat Simulator

Give your team more than phishing simulations—let them get hands-on with the tactics attackers actually use. The Threat Simulator is an interactive experience that'll help your learners think like hackers so they can defend themselves like pros.

Simulated Phishing

Keep learners vigilant with phishing simulations based on real-world threats. Run your own campaigns or have Huntress do it for you, choosing relevant scenarios and deploying them to your users. With API Message Insertion, you can bypass your email filters to improve deliverability to learners' inboxes.

Onboard in Minutes

Huntress built Managed SAT with the Admin in mind. Enjoy the easy-to-use features you expect from Huntress: onboard learners in minutes, only pay for active learners with User Directory Integrations, feature your company's branding in notifications and reports, and manage from a single portal with optimized multi-tenancy.

Phishing Defense Coaching

Transform learners' post-compromise experience into a learning opportunity based on the phishing scenario they interacted with. A Huntress Threat Researcher guides learners through the phishing email they clicked on, pointing out specific areas to pay attention to. Once completed, learners can self-report on their readiness to prevent future phishing attempts.

Custom Content Creator Tool

Managed SAT includes a lightweight but powerful learning management system (LMS). Build your own training by uploading videos, creating quiz questions, and sharing links. Custom content can be reused across multiple platforms.

Powerful Reporting & Notifications

Get insights into everything from learner progress, phishing simulation compromise rates, Phishing Defense Coaching feedback, the impact of your Phishing Training over time, and more through pre-canned in-portal reports, automated monthly reports, or custom-scheduled reports. Alert managers about direct reports with incomplete assignments and see completion status in real time.

Leaderboards

Add extra motivation for your learners to complete their assignments, score well on the quizzes, and stay vigilant for phishing attacks by introducing some friendly competition to your SAT program with leaderboards. Learners can earn and lose points based on SAT best practices and see how they stack up to their peers.
