**Accuracy, precision and speed  
in one recycling solution**

## Keep your cash flowing steadily and smoothly

Convenient, anonymous and easily transferable are just some of the reasons why cash still reigns as the most common payment method worldwide.

As cash transactions increase, retailers are increasingly looking for new ways to protect against shrinkage and robbery while cost and time savings remain a primary concern. Increased security, productivity and operational efficiency can be achieved through a cash-management solution that handles cash transactions quickly and efficiently.

Although retail cash usage is particularly strong, it comes with specific challenges for retailers:

- **Security risks:** retail robberies are on the rise, costing money and putting staff at risk of bodily harm
- **Lost time:** non-standardised and manual cash reconciliation processes can be time-consuming, limiting the time spent on sales and customer service
- **Shrinkage:** the average shrinkage is causing important losses in the retailer's revenues
- **High costs:** back-office tasks cost time and staff resources, and do not generate revenue

### Complete self-service cash management made easy

The Sallén RS6 is a self-service cash-recycling system that combines depositing and dispensing capabilities in one convenient solution for both notes and coins. You can quickly and securely fill, replenish and reconcile tills. Since notes and coins can be withdrawn and deposited, you benefit from a closed cash cycle, resulting in less emptying and filling machines, and lower administration costs.

The Sallén RS6 is supported by proven technologies for note and coin recyclers that were used in the bank sector. It has been specifically designed for the back office areas of big retail outlets, starting from 5 cash tills and more.

## Immediate benefits

- Increased security and reduced risk of robbery, as notes are kept in a certified safe
- Real-time cash monitoring via our software, allowing remote monitoring and tracking of the cash levels
- Full accountability for all cash going in and out through web-based online reporting and monitoring tools
- Time savings via simplified till opening and balancing
- Cost savings through improved collection planning
- Simple and easy-to-use system with no need to train operators and supervisors in new procedures or systems
- No manual paperwork required
- Pre-credit\* of the cash amounts deposited in the machine. Details of the cash amounts are automatically sent to the bank, allowing retailer's account to be pre-credited.

\* Pre-credit is submitted to the cooperation and authorization of the bank.

## At a glance: features

- **Operation modes:** configuration as a pure cash-in or cash-out terminal, combined cash-in/cash-out terminal or full recycler, or can be used to exchange notes for smaller or larger denominations. Sidecars: coin recycling, high-volume coin deposit and envelope deposit sidecars that extend functionality
- **Advanced user interface:** 15" multi-language touch screen that guides user through each transaction
- **Counterfeit rejection:** optical, ultraviolet, infrared and magnetic sensors that remove counterfeit money and poor-quality notes from circulation
- **Certification:** manufactured in accordance with ISO 9001 for Quality Management Systems and ISO 14001 for Environmental Management Systems

Sesami is a leader in the retail cash management sector with extensive experience working with retailers and other major players in the cash cycle. The Sallén RS6 is particularly suited to large supermarkets, shopping malls or exhibition centres where many small traders operate.

### Step 1: Filling

Depending on authorisation, select a pre-defined mix for your tills or choose from a selection of mixes. To make filling easier, coins are delivered by denomination in separate bowls with a dispensing speed of up to maximum of 50 coins per second, when all 8 hoppers dispenses simultaneously. Direct filling of the till is also possible.

### Step 2: Refilling

Replenish certain denominations up to a pre-defined limit throughout the day. A head cashier can also perform these actions on behalf of several cashiers.

### Step 3: Reconciling

Deposit bundles of up to 200 notes or the complete till with coins all at once. Up to 720 coins in 8 denominations can be counted and sorted per minute and up to 8 notes counted per second. Funds are automatically counted and authenticated, and a receipt is issued.

### Step 4: Monitoring

Continuously track the real-time cash level of each safe using Sesami's web-based monitoring software. This software can either be hosted by you or Sesami, and you can choose to run the programme locally or centrally.

## Technical Specifications

### Coins

Bulk Coin Input	Continuous feed
Coin Input Speed	12 coins / second
Bulk Coin Output	50 coins in a cup (Optional sorted coin dispense in 8 cups)
Coin Output Speed	50 coins / second
