

DecorX Unveils AI-Powered Home Shopping Agent & Interior Design Copilot at HumanX 2025, Launches Free AI Feng Shui Score & AI-Powered Product Visualization for the Public

Las Vegas, NV – March 10, 2025 – DecorX, the world's first **AI-powered home shopping agent and interior design copilot**, is set to make its debut at **HumanX 2025**, the world's premier AI conference. **Designed to revolutionize the way people design, visualize, and shop for their homes**, DecorX seamlessly integrates AI-powered design expertise with a **real-time home shopping experience**.

As part of its mission to **democratize home design**, DecorX is launching a **free AI-powered Feng Shui Score**, now available to the public at **DecorX.com**. Users can upload a photo of their space and receive **an instant Feng Shui score**, along with AI-generated recommendations to optimize balance, energy flow, and well-being.

“Our homes are the stages of our lives. Great design isn’t just about aesthetics—it’s about how a space makes us feel,” said **Mark Feng, Founder & CEO of DecorX**. *“With AI, we’re giving people the power of professional interior design, but making it instant, scalable, and accessible to everyone. You don’t need to scroll endlessly through products or wait months for a design proposal. Your dream home will come to life in real time.”*

AI-Powered Home Shopping & Interior Design Copilot – Amplifying the Reach of Designers

DecorX is redefining **how people design and shop for their homes** by integrating **large language models (LLMs), multimodal AI, and real-time product data** into a powerful, AI-driven home shopping experience.

✅ **AI-Powered Home Shopping Agent** – Personalized furniture recommendations based on real-time style analysis and spatial needs.

✅ **Interior Design Copilot** – AI that **reads floor plans, mood boards, and user preferences** to provide real-time, professional-level design guidance.

✅ **Style Labeling & Curation** – AI helps users **identify their personal style**, streamlining what used to be a lengthy and uncertain design process.

🎤 *“Our AI Interior Design Copilot is not here to replace designers—it’s here to scale them. It helps interior designers reach more people, amplify their unique style and expertise, and make high-quality design accessible to a wider audience.”*

By automating **time-consuming tasks like sourcing products, refining design concepts, and generating client-ready visuals**, AI enables designers to **spend more time on creativity and personalization while reaching more customers than ever before**.

And for the first time, AI can do what was once impossible—replace furniture in a room with real, purchasable products.

AI Inpainting & Product Visualization: See Your Future Home in Seconds

One of the biggest frustrations in home shopping is **not knowing how furniture will actually look in your space**. With AI-powered visualization, DecorX allows users to:

- ✓ **Take a photo of their room.**
- ✓ **Swap out existing furniture with real, purchasable items.**
- ✓ **See the transformation instantly—no need for complicated measurements or guesswork.**

 *"It's like test-driving furniture before you buy it—except instead of sitting on it in a showroom, you see it in your actual home."*

This technology **eliminates the uncertainty of furniture shopping**, helping people buy with confidence.

AI for Product Attribution, Silo Photography, & Lifestyle Photo Generation

In addition to transforming how customers shop for furniture, DecorX is also solving key challenges for **furniture brands and retailers** by improving **product attribution and AI-powered image generation**:

- ✓ **AI-Powered Product Attribution** – Automatically tags and categorizes furniture SKUs with precise style, material, and functional details to make search and discovery effortless.
- ✓ **Improving Silo Photography** – Enhances and standardizes **product images**, removing inconsistencies and making product listings more visually compelling.
- ✓ **AI-Generated Lifestyle Photography** – Generates **photo-realistic room scenes featuring real furniture**, allowing brands to instantly create marketing-ready visuals.

 *"For decades, furniture retailers have struggled with scattered product data and expensive photography production. Now, AI can clean up their catalogs, improve their visuals, and generate beautiful, on-brand lifestyle images instantly."*

Bringing AI Feng Shui to the Public

For the first time, **DecorX's AI Feng Shui Score is available for everyone, free of charge, at DecorX.com**. Users can:

- ✓ **Receive an instant Feng Shui Score** for their home.
- ✓ **Get actionable AI recommendations** to optimize energy flow and balance.
- ✓ **Experience the future of design**—where aesthetics, emotion, and well-being align seamlessly.

This launch is part of **DecorX's broader vision** to make home shopping more **personalized, intuitive, and intelligent**.
